VOLUME 158 SUBJECT INDEX

A

Abstract properties of individuals, emergence 685
Acid rain, effects on *Pinus ponderosa* 617
Acorus: ovule and anther anatomy, systematics 640, vessels 51
Aesculus hippocastanum, vascular cambium, ultrastructure 97
Agathis australis, reproductive biology 395
Agropyron desertorum, competive ability 851
Ajuga, reproductive biology 282
Alfalfa see *Medicago sativa* 556
Allocation to reproduction, *Pennisetum typhoides* 510
Alnus, leaves, gall development 13
Alpine *Saxifraga,* sexual reproduction 274
Amyema, effects of burning and defoliation 856
Anatomy: *Acorus* ovule and anther, systematics 640, *Lythrum salicaria,* imposed water gradient 172
Angiosperms, basal, flower homeotic genes S131
Anther anatomy, *Acorus* 640
Antheridiogen, effects on *Polystichum acrostichoides* 764
Apiaceae, floral development S49
Apical cell segmentation, Funariaceae 236
Apical dominance, *Verbascum thapsus* 461
Arabidopsis thaliana, flowering response 231
Arachis hypogaea, oleosins 136
Armeria, hybridization 585
Arum italicum, seed mass variation 298
Arundinella hirta, vascular pattern formation 1
Arundo formosana, egg apparatus, ultrastructure 713
Ascorbate:dehydroascorbate ratio, elevated foliar carbohydrate levels 442
Asparagus officinalis, protoplast isolation, culture and regeneration 537, 543
Athyrium filix-femina, inbred and outbred progeny 79

B

Banksia spinulosa, seed mass variation 424
Barley see *Hordeum vulgare*
Biomechanics, stem and root growth strains 418
Blandfordia grandiflora, reproductive biology 785
Book review: Patterns in fungal development 228
Brassicaceae, floral development S49
Bud fates, *Cercis canadensis,* experimentally induced changes 525

C

Callistopteris baueriana, gametophyte form 622
CAM, *Tillandsia ionantha,* responses to water stress 818
Carbon dioxide, elevated, effects 602, 608
Carbon metabolite levels, *Glycine max,* foliar 32
cDNA probe, *Phoenix dactylifera* 152
Cell-cycle duration, modeling duration 757
Ceratodon protonemata, gravitropism 24
Cercis canadensis, bud fates 525
Chlorosis, *Hordeum vulgare* leaves, elevated CO_2 602
Cladoxylopsid, *Pseudosporochnus nodosus,* reinvestigation 350
Clarkia tembloriensis, pollen tube attrition 519
Clarkia unguiculata, pollen clumping 292
Competition: *Agropyron desertorum* 851; C_4 grasses 325
Confocal laser scanning microscopy, *Phaius tankervilliae* suspensor development 704
Conospermae, synorganization S13
Cretaceous: Early, hepatophytes 476; Late, polytrichaceous sporophytes and gametophytes 489; Late, platanaceous flowers 373; Upper, aquatic angiosperm 83
Cultivar identification, *Phoenix dactylifera* 152
Cuticle micromorphology, *Prumnopitys* 198
Cynodon dactylon, impact of water stress, ultrastructure 313
Cytology, *Elymus* 872

D

Daphne odora, microcuttings, stimulation of rooting 132
Defoliation and burning, effect on *Amyema* 856
Dendrobium, comparative leaf anatomy 332
Development: *Aesculus hippocastanum,* taproot vascular cambium ultrastructure 97; *Agathis australis,* late embryogeny 395; *Alnus* leaf galls 13; *Asparagus officinalis,* protoplast isolation 537, protoplast culture and regeneration 543; *Arabidopsis thaliana,* flowering 231; *Arachis hypogaea,* root nodule oleosins 136; *Arundinella hirta* vascular pattern 1; *Arundo formosana,* egg apparatus ultrastructure 713; cell-cycle duration, model 757; *Ceratodon protonemata,* gravitropism 24; *Cercis canadensis,* bud fates 525; *Fagopyrum esculentum,* embryogenesis ultrastructure 110; floral development S3, S13, S49, S143; Funariaceae, apical cell segmentation 259; *Glycine max,* photoperiod sensitivity 142; grass inflorescences, emergence 685; homeostasis and floral form S121; *Leea guineensis,* leaf heteroblasty 747; *Leonotis leonurus,* trichome ultrastructure 249; *Marchantia polymorpha,* phosphatase activity during senscence 552; *Medicago sativa,* somaclonal variation 556; *Montrichardia arborescens,* flower and inflorescence 408; ontogenetic contingency and floral morphology S99; *Phaius tankervilliae* suspensor 704; *Picea glauca,*origin of embryo root cap cells 738; *Pinus taeda,* seed protein reserves 727; *Polystichum acrostichoides,* antheridiogen neighborhood 764; *Quercus suber,* somaclonal variation 563; rooting stimulation, dithiothreitol 132; *Salvinia molesta,* shoot morphology and organogenesis 693; *Tectona grandis,* embryogenesis 259; tree stems and roots, longitudinal growth strains 418; wheat, spike procambial initiation 121; wheat straw stems, immunolocalization of xylanase 769
Developmental homeostasis, floral form S121
Devonian, Middle, cladoxylopsid 350
Dithiothreitol, stimulation of root formation 132
Diversification, floral nectar spurs S81
Drought stress, response of *Lythrum salicaria* 172

E

Ecology: *Agropyron desertorum,* competition 851; *Amyema,* responses to burning and defoliation 856; C_4 grasses, competition 325; *Leymus arenarius,* adaptation to low salinity 73; *Lythrum salicaria* response to imposed water gradient 172; *Microbotryum violaceum,* effect on host life history 164; *Thlaspi montanum,* localization of nickel 184; *Verbascum thapsus,* apical dominance as an adaptation 461; *Vicia dumetorum,* reaction norm variation and RAPD diversity 593
Ecophysiology: riparian graminoids 835; *Spartium junceum* 827
Egg apparatus, *Arundo formosana* 713
Elymus, systematics 872
Embryo root cap cells, *Picea glauca* 738
Embryogenesis: *Agathis australis* 395; *Arundo formosana* 713; *Fagopyrum esculentum* 110
Emergence, grass inflorescences, properties of individuals 685
Endolithic and epilithic lower plants, ecophysiology 451
Eriophyes, gall development 13
Ethanol synthesis, flooded *Pseudotsuga menziesii* 844
Euphorbia section *Tithymalopsis,* isozyme and morphological divergence 465
Evolution: floral homoplasy S65; floral morphology S99, S108

F

Fagopyrum esculentum, embryogenesis 110
Floral morphology S99; *Phytolacca* 57
Floral development S3, S143; Apiaceae and Brassicaceae S49; *Siparuna* S89
Floral evolution S143
Floral morphology, developmental homeostasis S121
Flower development, *Montrichardia arborescens* 408
Flower homeotic genes S131
Flowering response, *Arabidopsis thaliana* 231
Funariaceae, apical cell segmentation 236
Fungi, pattern formation 228

G

Galls, development, *Alnus* leaves 13
Gametophyte, *Callistopteris baueriana,* systematics 622

Genetics: *Armeria,* natural and experimental hybridization 585; *Athyrium filix-femina,* inbreeding 79; *Microbotryum violaceum,* sporidial mating-type ratios 575; *Raphanus raphanistrum,* floral evolution S108
Glossopterid sporangia, Permian, taeniate bisaccate pollen 673
Glycine max: foliar carbon metabolite levels 32; effects of nitrogen limitation 442; photoperiod sensitivity 142
Gnetales, flower homeotic genes S131
Grass inflorescences, individual properties, emergence 685
Grasses, C_4, competition 325
Gravitropism, *Ceratodon* protonemata 24

H

Hepatophytes, Early Cretaceous 476
Histochemistry, *Leonotis leonurus* trichome secretions 249
Homeostasis, developmental, floral form S121
Homeotic genes, flower, evolution S131
Homoplasy, floral, role of ontogenetic evolution S65
Hordeum vulgare, response to elevated CO_2 602
Hybridization, *Armeria* 585
Hydrangeaceae, morphological phylogenetic analysis 652

I

Immunolocalization of xylanase 769
Inbreeding, *Athyrium filix-femina* 79
Inflorescence development, *Montrichardia arborescens* 408
Isozyme divergence, *Euphorbia* section *Tithymalopsis* 465

K

Kauri see *Agathis australis*
Key innovation, floral nectar spurs S81

L

Leaf anatomy: *Cynodon dactylon,* water stress 313; Dendrobium 332
Leonotis leonurus, glandular trichomes, ultrastructure 249
Leucangium carthusianum 189
Leymus, systematics 872
Leymus arenarius, adaptation to low salinity 73
Life cycle, *Pharbitis nil,* effects of low temperature 306
Life-history patterns: effects of fungal pathogen 164; *Yucca whipplei,* reproductive patterns 778
Lilium flower bud, photosynthetic apparatus 794, 801
Low-temperature stress, *Pharbitis nil* 306
Lycopodiaceae, phylogeny 862
Lythrum salicaria, responses to imposed water gradient 172

M

Malus domestica: microcuttings, stimulation of rooting 132; postharvest ripening 811
Mandevilla (Dipladenia) sanderi, microcuttings, stimulation of rooting 132
Marchantia polymorpha, senescence 552
Mating-type ratios of teliospores, *Microbotryum violaceum* 575
Medicago sativa, somaclonal variation 556
Microbotryum violaceum: differentiating subpopulations 568; effects on host 164; sporidial mating-type ratios of teliospores 575
Mistletoes, control of *Amyema* 856
Model, estimation of cell-cycle duration 757
Molecular genetics: *Microbotryum violaceum,* differentiating subpopulations 568; *Phaseolus vulgaris,* recovery of transgenic plants 157; *Phoenix dactylifera,* identification with cDNA probe 152
Molecular phylogeny, Lycopodiaceae 862; *Siparuna* S89
Monocotyledons, origin of vessels 44
Montrichardia arborescens, flower and inflorescence development 408
Morphology and evolution of flowers: S1, S3, S13, S49, S65, S81, S89, S99, S108, S121, S131, S143
Morphology: effect on recovery of transgenic plants 157; floral, effects of architecture and resource limitation S99; floral, *Phytolacca* 57; shoot, *Salvinia molesta* 693

N

Nectar spurs, floral, diversification S81
Niagara Escarpment, endolithic and epilithic lower plants 451
Nickel, serpentine soils, *Thlaspi arvense* 184
Nitrogen stress: *Glycine max* 32, 442; *Spinacia oleracea* 432, 442

O

Oleosomes, *Arachis hypogaea* oleosins 136
Ontogenetic contingency, floral morphology S99
Ontogenetic evolution, floral homoplasies S65
Orchidaceae, tracheary studies, terrestial ancestry 222
Organogenesis, *Salvinia molesta* 693
Ovule anatomy, *Acorus* 640
Ozone, effects on *Pinus ponderosa* 617

P

Paleobotany: Glossopterid sporangia, Permian, taeniate bisaccate pollen 673; Hepatophytes, Early Cretaceous, systematics and paleoecology 476; Polytrichaceae, Late Cretaceous sporophytes and gametophytes 489; *Pseudosporochnus nodosus,* middle Devonian, reinvestigation 350; *Quadriplatanus georgianus,* Cretaceous Platanaceae 373; *Trapago angulata,* upper Cretaceous, aquatic angiosperm 95
Paleoecology, Early Cretaceous hepatophytes 476
Paspalum plicatulum, competition 325
Pattern formation: fungi 228; vasculature in developing leaves 1
Pearl millet see *Pennisetum typhoides*
Pennisetum typhoides, reproductive biology 510
Peristome-forming layers, Funariaceae 236
Permian glossopterid sporangia, bisaccate pollen 673
Pezizales, hypogeous, *Leucangium carthusianum* 189
Phaius tankervilliae, suspensor development 704
Pharbitis nil, effects of low temperature 306
Phaseolus vulgaris, transgenic plants 157
Phlebodium, vessels 343
Phoenix dactylifera, cultivar identification 152
Photoperiod sensitivity, *Glycine max* 142
Photosynthesis, tallgrass prairie species, elevated CO_2 608
Photosynthetic apparatus, *Lilium* flower bud 794, 801
Phylloglossum drummondii, systematics 862
Phylogenetic analysis, Hydrangeaceae 652
Physiological ecology: *Cynodon dactylon,* impact of water stress 313
Physiology: endolithic and epilithic lower plants 451; *Glycine max,* effect of nitrogen limitation 32, 442; grasses, tallgrass prairie, effect of elevated CO_2 and drought 608; *Hordeum vulgaris,* effect of elevated CO_2 and irradiance 602; *Lilium,* flower bud photosynthetic apparatus 794, 801; *Malus domestica,* postharvest ripening 811; *Pinus ponderosa,* effects of acid rain and ozone 617; *Pseudotsuga menziesii,* ethanol synthesis in response to flooding 844; riparian graminoids, responses to changes in the water table 835; *Spartium junceum,* variance in traits between genets and ramets 827; *Spinacia oleracea,* effect of nitrogen limitation 432, 442; *Tillandsia ionantha,* CAM epiphyte, responses to water deficit 818; tropical vine root pressure 44
Phytolacca, floral morphology 57
Picea glauca, embryo root cap cells 738
Pinus ponderosa, acid rain and ozone effects 617
Pinus taeda, seeds, storage protein reserves 727
Platanaceous flowers, Late Cretaceous 373
Podocarpaceae, *Prumnopitys,* cuticle micromorphology 198
Pollen clumping, *Clarkia unguiculata,* effects on germination 292
Pollen limitation, *Blandfordia grandiflora* 785
Pollen tube attrition, *Clarkia temblorіensis* 519
Polystichum acrostichoides, effects of antheridiogen 764
Polystichum, vessels 343
Polytrichaceae, Late Cretaceous, sporophytes and gametophytes 489
Postharvest physiology, *Malus domestica* 811
Procambial initiation, *Triticum spike* 121
Protoplast isolation, culture, and regeneration, *Aparagus officinalis* 537, 543
Prumnopitys, cuticle micromorphology 198

Pseudosporochnus nodosus, Middle Devonian, reinvestigation 350
Pseudotsuga menziesii, flooded, ethanol synthesis 844

Q

Quadriplatanus georgianus gen. et sp. nov., Late Cretaceous platanaceous flowers 373
Quantitative genetics, floral evolution S108
Quantitative growth, *Spartium junceum*, variance between genets and ramets 827
Quercus suber, somaclonal variation 563

R

RAPD analysis: differentiating populations 152, 568; genome analysis 872; somaclonal variation 556, 563; *Vicia dumetorum* 593
Raphanus raphanistrum, floral evolution S108
Reaction norm variation, RAPD diversity 593
Reproductive Biology: *Ajuga* 282; *Arum italicum*, seed mass variation 298; *Banksia spinulosa*, seed mass variation 424; *Blandfordia grandiflora*, demographic costs of seed production 785; *Clarkia tembloriensis*, pollen tube attrition 519; *Clarkia unguiculata*, effects of pollen clumping 292; *Pennisetum typhoides*, allocation to reproduction 510; *Pharbitis nil*, influence of low temperature 306; *Saxifraga*, alpine 274; *Silene noctiflora*, pistillate flower production 501; *Tectona grandis* 249; *Yucca whipplei*, effects of life history 778
Riparian graminoids, ecophysiology 835
Root formation, stimulation, dithiothreitol 132
Root pressure, tropical vines 44
Root nodules, *Arachis hypogaea*, oleosomes 136
Rooting manipulation, *Arabidopsis thaliana*, flowering response 231

S

Salinity stress, *Leymus arenarius* 73
Salvinia molesta, shoot morphology and organogenesis 693
Saxifraga, sexual reproduction 274
Schizachyrium scoparium, competition 325
Seed storage protein reserves, *Pinus taeda* 727
Seed mass variation: *Arum italicum* 298; *Banksia spinulosa* 424
Seed production, *Blandfordia grandiflora*, demographic costs 785
Senescence: *Malus domestica* 811; *Marchantia polymorpha* 552
Serpentine soils, *Thlaspi arvense*, nickel localization 184
Silene latifolia, effects of *Microbotryum violaceum* 164
Silene noctiflora, reproductive biology 501
Siparuna, phylogenetic position S89
Somaclonal variation: *Medicago sativa* 556; *Quercus suber* 563
Soybean see *Glycine max*
Spartium junceum, variance to quantitative growth and physiological traits 827
Spinach see *Spinacia oleracea*
Spinacia oleracea, effects nitrogen limitation 432, 442
Stereology, *Ceratodon* protonemata, gravitropism 24
Stirlingia, developmental basis of synorganization S13
Stress, effects on *Silene noctiflora* pistillate flower production 501
Suspensor development, *Phaius tankervilliae* 704
Synorganization, Conospermae S13
Systematics: *Acorus*, ovule and anther development 640; *Acorus*, vessels 51; *Callistopteris baueriana*, gametophyte form 622; *Dendrobium*, leaf anatomy 332; Early Cretaceous hepatophytes 476; *Elymus*, transfer to *Leymus* 872; *Euphorbia* section *Tithymalopsis*, isozyme and morphological divergence 465; homeotic gene homologs, flower, basal angiosperms an Gnetales S131; homoplasy, floral, role of ontogenetic evolution S65; Hydrangeaceae, phylogeny based on morphological data 652; *Leucangium carthusianum*, ultrastructure 189; Lycopodiaceae, rbcL phylogeny 862; Orchidaceae, tracheary studies 222; *Phlebodium* and *Polystichum*, vessels 343; *Phytolacca*, floral morphology 57; *Prumnopitys*, cuticle micromorphology 198; Siparunaceae, phylogenetic position and floral function S89

T

Teak see *Tectona grandis*
Tectona grandis, embryogenesis 249
Thlaspi montanum var. *siskiyouense*, localization of nickel in leaves 184
Tillandsia ionantha, responses to water stress 818
Tissue culture: *Aparagus officinalis* 537, 543; somaclonal variation 556, 563
Tracheary studies, Orchidaceae 222
Transgenic plants, *Phaseolus vulgaris* 157
Trapago angulata, Upper Cretaceous, aquatic angiosperm 83
Trees, stem and root growth strains 418
Triticum, immunolocalization of xylanase 769
Triticum spike, procamial initiation 121
Tropical vines, root pressure 44

U

Ultrastructure: *Aesculus hippocastanum*, vascular cambium 97; *Arundo formosana*, egg apparatus 713; *Cynodon dactylon*, water stress 313; *Fagopyrum esculentum*, embryogenesis 110; *Leonotis leonurus* glandular trichomes 249; *Leucangium carthusianum* 189; *Tectona grandis* embryogenesis 259

V

Vascular pattern formation, C_4 grass 1
Vascular cambium, *Aesculus hippocastanum* 97
Vascular system, *Triticum spike*, procambial intiation 121
Verbascum thapsus, apical dominance as an adaptation 461
Vessels, *Acorus* 51
Vicia dumetorum, reaction norm variation and RAPD diversity 593
Vines, tropical, root pressure 44

W

Water stress: riparian graminoids 835; tallgrass prairie 608; *Tillandsia ionantha* 818
Wheat see *Triticum*
Whorled flowers, floral development S49

X

Xylanase, immunolocalization 769

Y

Yucca whipplei, reproductive biology 778
